

[How to replace the touch screen for Siemens HMI Panel?](#)

1. Please check and make sure is integrated when you receive [vicpas](#) touch product from the Express.

2. Before install, please connect the panel to the machine and get through electricity to check it workable or not, Notice: do not take off

Double-sided adhesive in the both sides of the panel when you testing the function, although we would test and make sure it is working well before delivery.

3. If workable, put your broken machine and panel in a large and clean desk, first of all, remove the front foil cove in the front of the panel, then remove the broken **siemens touch screen** from the machine and clean the glue and dust of the install place, make sure the new panel can be installed in a good way. Be careful when you removing, the broken **siemens touch screen** is very dangerous to hurt your finger or somewhere, the most convenient way is damaged the broken panel to little piece then remove slowly and carefully.

4. Everything is ready, take off the Double-sided adhesive we provide around the plastic cove of front, then remove the transparent protected

film in the back side of the panel, stick it to the plastic cover which full with Double-sided adhesive little by little, please pay more attention in the connector of the panel when you installed, this is the very important thing, If this process in wrong operating, the function of the panel would be damage, even un-work any more, and this not in grantee of us, therefore it must be most carefully.

5. After install the panel with the plastic, then connect the connector of the panel to the main-board of the machine to test, if everything goes well, them install the new front foil cover to the plastic to protect the panel when being touched or operated.

See Below Picture showing how to do this:
